Measuring machine series

SMW-450H
X-Y-Z Measuring Machine

Designed to measure X, Y and Z dimensions while allowing you to observe a color image of the panel and print out the measured data in 1-µ steps. The measurable range is 450mm (X) by 350mm (Y).

SMC-120
Cutter Measure

The soft touch measuring system realizes no damage for the cutter tips. This is the high precision measuring unit provided with the special designed cutter clamp system. The measuring can be performed basis on the center of cutter axis by using the spring type of cutter jig.
The measuring value can be printed-out. (Option)

SMV-250
Web-Thickness Tester
(for V-scoring)

Designed to measure the web-thinckness of V-scores and print out the measured data. The Sofmix's unique structure of the machine enables an accurate measurement of V-slots on both front and rear sides of the panels.
